## PROFILE

Versatile Full Stack Engineer with over 7+ years of experience developing, integrating, and maintaining enterprise applications across frontend, backend, cloud, and DevOps.

Skilled in Java, Kotlin, Node.js, React, Angular, MongoDB, Azure, CI/CD, and API integrations, with hands-on experience delivering scalable systems and AI-enabled solutions.

Strong end-to-end delivery mindset, with the ability to support the full software lifecycle from application development to infrastructure and production operations.

## PROFESSIONAL EXPERIENCE

**Senior Full Stack Engineer,** *Maybank*

03/2025 – Present | Kuala Lumpur, Malaysia

- Delivered and evolved the EA Portal (React, Node.js, MongoDB) as a lead member of the team, covering request management, approval workflows, dashboards, filtering, personalization, and automated notifications.
- Led Agentic AI initiatives using Microsoft Copilot Studio (Agent Builder) to design and integrate agentic AI workflows, connecting enterprise systems and automating multi-step business processes across the AI development lifecycle.
- Modernizing enterprise applications by decoupling production databases and migrating workloads to scalable, maintainable cloud-based systems.
- Designed and integrated agentic AI workflows using Microsoft Copilot Studio (Agent Builder), connecting enterprise systems and automating multi-step business processes.
- Reduced security findings by remediating vulnerabilities, upgrading outdated packages/dependencies, and keeping runtime libraries aligned with bank security standards.
- Shipped 20+ production releases with zero-downtime deployment practices, supporting feature enhancements, cost monitoring, and operational improvements.

**Senior Backend Engineer,** *EDAG Malaysia*

07/2022 – 12/2024 | Shah Alam, Malaysia

- Designed and developed high-throughput backend services using Spring Boot, Kotlin, and Gradle, with focus on scalability, reliability, and maintainability.
- Optimized Oracle and PostgreSQL database queries, schemas, and data access patterns for high-volume, data-intensive workloads.
- Built and maintained CI/CD pipelines using Bamboo, Docker, Kubernetes, Helm, and OpenShift to improve deployment consistency and production release quality.
- Developed ETL services to ingest and process large-scale data from Amazon S3 into backend platforms.
- Implemented RBAC and JWT-based authentication to strengthen application security and access control.
- Improved code quality by maintaining SonarQube quality gate standards above 80%, reducing technical debt and improving maintainability.
- Contributed to technical design, solution planning, and delivery coordination across backend, database, and DevOps workstreams.

**Full Stack Developer,** *Etiqa Insurance & Takaful*
08/2020 – 07/2022 | Kuala Lumpur, Malaysia

- Developed and maintained Back Office Portal features using Angular, Angular Material, Node.js, Express, and MariaDB for enterprise insurance operations.
- Built RESTful APIs, backend services, and database workflows to support business-critical application functionality.
- Managed Sequelize ORM database migrations, server integration, RTC check-ins, and environment setup to streamline deployment activities.
- Delivered the SME BizCare platform, supporting 500+ active users across frontend and backend modules.
- Automated XLSX report generation and credit breach notification workflows, reducing manual effort and improving operational tracking.
- Supported production releases, hotfix deployments, and application stability for Angular and Node.js services.
- Integrated SonarQube quality checks to improve code maintainability and reduce technical debt before production release.

**IT Specialist - Full Stack Developer,** *iFAST Service Centre Sdn Bhd*
02/2019 – 01/2020 | Kuala Lumpur, Malaysia

- Developed a versatile FAQ module for an external project, integrating Angular 8 and Java with both client and back office portals
- Implemented a comprehensive translation module for Client 3.0 login portal, enabling seamless language switching between English and Chinese
- Streamlined deployment processes to staging and production environments using Git and Jenkins for efficient version control and automation
- Contributed to the Soft Token project, enhancing client security for high-risk transactions through biometric and fingerprint authentication

## EDUCATION

**Bachelor of Computer Science (Honors),** *Taylor's University Lakeside Campus, Subang Jaya*
2016 – 2019
CGPA 3.88/4.00

## SKILLS

**Programming Languages**
TypeScript, JavaScript, Kotlin, Java

**Databases**
Oracle DB, Postgres DB, MariaDB, MySQL

**Frontend Frameworks & Libraries**
Angular 9, AngularJS, React, Angular Material, Bootstrap, Material Design, TailwindCSS

**Backend Frameworks & Libraries**
Spring Boot, Hibernate, NestJS, Express, Flyway, Sequelize

**DevOps Tools**
Kubernetes, Docker, RedHat OpenShift, Helm, Jenkins, SonarQube, Bamboo, ArgoCD, GitHub Actions

**Software Development**
Agile Methodologies, Test-Driven Development, RESTful API Design, JIRA

## PROJECTS

**Carbnb**

- Developed full-stack car subscription platform using Next.js, React, and Supabase with integrated Curlec payment processing and real-time booking management

- Built admin dashboard featuring vehicle inventory management, master calendar scheduling system, and PWA capabilities for enhanced mobile experience

**MQBC Website**
- Designed and developed customized council websites to meet client-specific requirements, improving client satisfaction by 20%.
- Implemented professional email hosting services, enhancing client communication and branding.
- Integrated Google Analytics for visitor tracking and user behavior analysis, enabling data-driven improvements.

**Frankitas 2.0 Website**
- Adapted premium theme code and server configurations to support domain customization, enhancing website functionality and user experience.
- Optimized site structure and implemented SEO best practices, boosting online visibility and increasing organic traffic by 25%.

**The Shiz**
- Founded and operate a web and application development studio delivering custom digital solutions for Malaysian businesses.
- Lead end-to-end client delivery across requirements gathering, UI/UX, full-stack development, deployment, hosting, SEO, and maintenance.
- Built websites, web applications, e-commerce solutions, and business platforms tailored to client requirements.
- Manage client communication, project planning, technical implementation, production support, and continuous enhancements.

## CERTIFICATES

- Microsoft Certified: Azure Solutions Architect Expert
- Microsoft Certified: Azure Administrator Associate
- Microsoft Certified: Azure Developer Associate
- Microsoft Certified: Azure AI Fundamentals
- Rancher Academy - Kubernetes Basics
